

Langley Research Center

Prediction Of Worldwide Energy Resources (POWER)

Enabling actionable decisions, accelerating learning, and improving outcomes in energy, infrastructure, and agroclimatology in the United States and around the world.

NASA Global Data for Decisions

No Cost & No Account Needed

Solar Radiation

Solar flux data from satellite analysis and research

Meteorology Conditions

Meteorological data from models optimized with observations

Temporal levels from: Hourly > Daily > Monthly > Annual > Climatology

✓ **2,500+ Community Parameters**
With scientific validation

✓ **Long-term Historical Time-series Data**
For variability analysis, impact studies, and planning

✓ **Units & Formats for User Communities**
Improves usability and lower data integration costs

User Friendly Tools

DAV

Data Access Viewer

Data subsetting and visualization

PRUVE

PaRAMeter Uncertainty Viewer

Statistical analysis and validation

API

Service Endpoints

Data access for custom scripts

GIS

Geospatial Services

Mapping, visualization, and analysis

Monthly Metrics

22 Million

Data Requests

1.8 Terabytes

Data Volume

45 Thousand

Unique Users

The metrics represent a typical month in 2024. Unique users is a proxy since user registration is not required.

NASA POWER provides trusted, free solar and meteorological analysis-ready data derived from NASA Earth observations, modeling, and scientific expertise to enable actionable decisions, accelerate learning, and improve outcomes in energy, infrastructure, and agriculture.

NASA POWER

Weather Seasons with Confidence

Across regions, nations, and the globe

Supported Agriculture Projects

- Crop Modeling & Yield Forecasting
- AI/ML Applications
- Site Suitability Analysis
- Economic Feasibility & Insurance Studies
- Irrigation Planning & Water Management
- Disaster Risk & Resilience Planning
- Livestock & Heat Stress Analysis
- Food Security Assessments
- Crop Management Strategies

Encourages strategic resource management and economic advantage

Increases accessibility to food security and informs public health decisions

Bridges data gaps for underserved geographic regions worldwide

Provides opportunities for data driven education and research

Societal Benefits

User Impact Stories

Regrow Ag uses POWER data to **inform farmers** how to **effectively and economically** use their land.

EOS Data Analytics' crop growth monitoring system uses POWER data to observe crop behavior and **inform crop disease and yield forecasts**.

The **Brazilian Agricultural Research Corporation (Embrapa)** uses POWER data to improve **crop risk analysis and insurance modeling** for sustainable agriculture.

Yielddata uses POWER data to **enhance model scalability, improving financial and insurance risk assessments** and **crop management strategies** for farmers and suppliers.

DAV | Data Access Viewer

Provides access to data via custom parameter selections; allows users to subset and download data, perform basic statistical analysis, and generate community reports.

PRUVE | PaRAMeter Uncertainty ViEwer

Provides comparative analysis of satellite based and assimilation data products to in-situ surface site measurements.

API | Service Endpoints

Service endpoints providing analysis ready data for direct integration into external decision support tools, providing data responses in web compliant standards in community specific formats.

GIS | Geospatial Services

Service endpoints providing efficient data access within geospatial applications enabling time-series based access to monthly, annual, and climatology solar radiation and meteorology datasets.

NASA POWER provides trusted, free solar and meteorological analysis-ready data derived from NASA Earth observations, modeling, and scientific expertise to enable actionable decisions, accelerate learning, and improve outcomes in energy, infrastructure, and agriculture.
